

Two Great Snakes

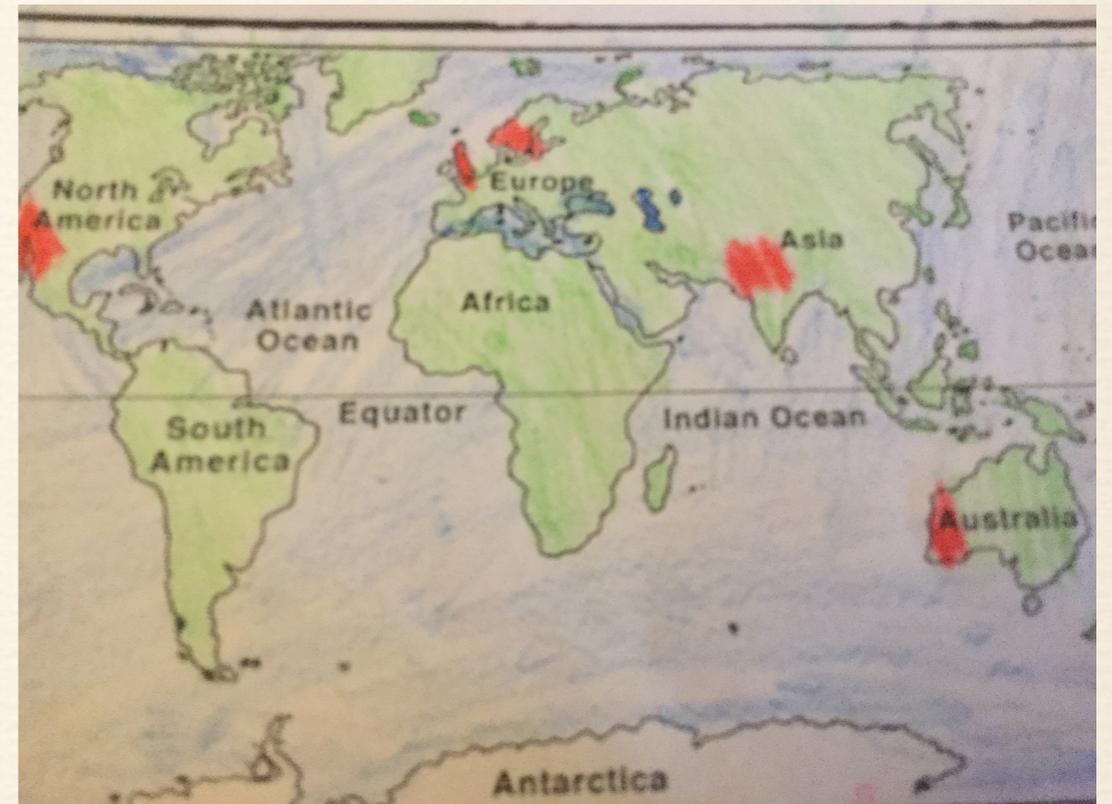

By Kosse Berry

Habitats

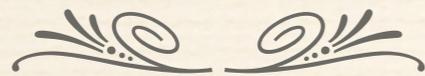

Rattlesnakes live in the western region of the USA. In addition to North America they live in northwest Europe, northeast Asia, and southern Australia. So, the rattlesnake can live just about in any continent. Also, there are 24 types of rattlesnakes. One example is a diamond back. I hope you learned something about where they live.

There are the places where they live

Body Cover

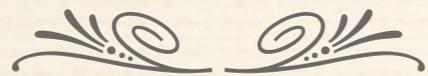

Rattlesnakes have scales that help them to camouflage depending on where they live. The scales can be green, pink, and rust colored. In addition, snakes use camouflage so that predators can't see the rattlesnake so they can strike at their dinner. Finally Rattlesnakes are reptiles. Reptiles have scales and lay eggs.

Body Parts For Survival

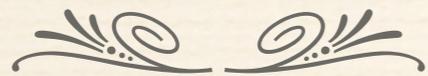

Rattlesnakes have a lot of venom in their body. They use it for to kill animals. They do this so they can use energy from the meal to keep them alive. Also, rattlesnakes can live to twenty-thirty years old. So, if you get one when you're one then when your 20 it will probably die. Those are some examples of what the rattlesnake uses.

Predators and Prey

The rattlesnake's predators are humans. Although the rattlesnake is dangerous and poisonous, all of its poison is in its head so you can cut it off, but you would be harming the rattlesnake. The snake eats rabbits mice and small rodents to survive and it is a carnivore which only eats meat. Also, some birds try to eat it but they die. Also, rattlesnakes have sharp teeth.

bite

More Stuff

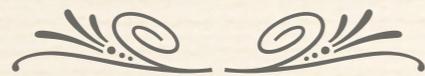

- ❖ Cold blooded
- ❖ Carnivores
- ❖ Reptiles
- ❖ Length (3-5 m)

Boa constrictor

Habitat

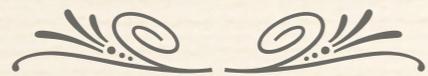

The boa constrictor lives in grass lands and forests. One of those is located in North America in Mexico. Also, it lives in South America. In addition it lives in Rio. And I almost forgot the Amazon Rainforest .

The habitat were the boa constrictor lives

Foods

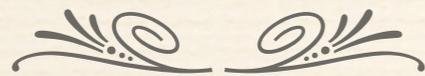

*The boa constrictor eats mice and rodents.
The boa constrictor kills animals by squeezing
the animals neck. It suffers the animal and
then it dies. Also, it kills humans the same way.
It does it for every animal that try's to eat it.*
